

TC Energy West Pipelines (GTN, Tuscarora and North Baja)

Guidelines for Retroactive Nomination Change Requests

Effective November 1, 2024

TC Energy Philosophy: This is a courtesy service. Retroactive nomination changes are not intended as a replacement for accurate and timely nominations.

Process

- Shipper must complete the Retro Request Form, gather all approvals, and send all items in a single email to WesternPipeScheduling@tcenergy.com. TC Energy cannot accept requests not approved by the relevant interconnecting parties.

TC Energy Makes Every Effort to Accommodate:

- Changes due to cuts made in error by TC Energy
- Operator requested changes due to an error on the interconnecting party's side.

TC Energy Reserves the Right to Reject:

- Requests to correct errors after a gas day has been scheduled. TC Energy provides automated cut notices and multiple nomination cycles. All gas should be nominated correctly before the end of the gas day.
- Requests to create a new nomination after the day/cycle is complete.
- Requests that are administratively burdensome, such as those that will affect multiple market center contracts.

TC Energy Will Not Allow:

- Any retro request to restore a nomination that was cut going through an area or to a location that was under constraint and subject to PCC cuts. This includes reallocating cuts due to PCC.

Exceptions to the above may be considered on a case-by-case and not unduly discriminatory basis.

All retroactive changes are made on a best effort basis.

All guidelines are subject to change at TC Energy's sole discretion.
